

The Data Detective Passport

One card. Six stamps. Collect them all across the two days.

Print one per participant, ideally on card. Participants carry it through Day 2 and Day 3 and collect a stamp, signature or sticker from a facilitator each time they complete a case. It costs almost nothing, takes ten seconds per stamp, and it does three useful things: it gives quiet participants a reason to approach a mentor, it shows you at a glance who has fallen behind, and people genuinely want to complete it.

TIP

Do not make it a competition between individuals — make completing it the standard. A small certificate or prize for everyone who fills the card works far better than a prize for the first to finish.

CASE 1 Activity 1

The Suspect Variable

I can classify any variable as nominal, ordinal, discrete or continuous — and say why.

SOLVED

CASE 2 Activity 2

The Missing Denominator

I never report a percentage without its n and N, and I decide my denominator before I see the answer.

SOLVED

CASE 3 Activity 3 / Factsheet 2

The Lying Average

I check whether my data are skewed, and I choose mean or median for a reason I can state out loud.

SOLVED

CASE 4 Activity 8, Part 1

The Dirty Dataset

I ran all seven cleaning checks and found the planted errors.

SOLVED

CASE 5 Activity 4 / Activity 8

The Misleading Chart

I can diagnose a misleading graph — and I have fixed one of my own.

SOLVED

CASE 6 Activity 6

The Silent Result

I can turn a number into a sentence a District Health Officer would act on, without using the word 'significant'.

SOLVED

Detective name: _____ Municipality: _____

All six cases solved — facilitator signature: _____
